SUMMARY

Computer Science student and full-stack developer. Built a Laravel + React system to manage container demurrage end-to-end during a development apprenticeship at Mojo Logistics Hub, and spent a month training and reviewing AI model outputs at Revelo. Comfortable across the stack, from database design to shipping a tested, role-based application.

EXPERIENCE

Software Development Apprentice · Mojo Logistics Hub

Aug 2026 - Present

Built the **Demurrage Management System**, a Laravel + React application for managing the full container demurrage lifecycle — from case creation through calculation to payment — now used to run the hub's demurrage workflow.

Modeled customers, shipments, containers, and demurrage rate tiers, with calculations frozen against the exchange rate and tier actually used so historical results never silently change.

Built role-based access control for admin, payment officer, and DO officer roles, including account suspension instead of deletion.

Implemented a daily exchange-rate workflow with a same-day correction flow, plus bulk customer import from Excel/CSV.

Covered core calculation logic with a Pest test suite to keep pricing changes safe.

Laravel 13 · React 19 · React Router 7 · Tailwind CSS 4 · Vite · SQLite · Pest

AI Trainer · Revelo

Jan 2026 · 1 month · Remote

Trained and evaluated AI models by writing high-quality, contextually accurate responses, and reviewed outputs for errors and bias.

Turned findings into structured feedback for the ML engineering team as part of a short annotation engagement.

PROJECTS

University Portal

Dec 2025 - Jan 2026

Frontend project

Designed and built the frontend of a university web portal, with dashboards, navigation, and forms for course registration and grades across student, teacher, and administrator roles.
